

TuffSet CT Switch System

*Specifically designed
for web enabled call centers*

Built To Answer The Call

The TuffSet CT Switch System Allows the Use of One Headset for Both Computer and Telephone Applications

The TuffSet CT Switch System is perfect for customer service representatives who need to operate both telephone and computer for audio applications. A powerful compliment to our family of TuffSet products specifically designed for web enabled call centers. Instead of alternating between two headsets, call center representatives can now wear one headset and simply switch between phone and computer applications with the touch of a button. Combining durability, comfort, and superior sound quality, TuffSet headsets have been designed and built to meet the heavy use demands of today's 24/7-call center. The TuffSet CT Switch works with all previous call center headset models including the Bear and the Gold Series and the current VXI TuffSet headset styles; the TuffSet 20 binaural, TuffSet 10 monaural, the TuffSet 36 over-the-ear, and the noise-attenuating TuffSet 15 and TuffSet 25.

VXI TuffSet Headsets Include

- Superior noise canceling microphones for professional sound quality
- All day wearing comfort
- "Gooseneck" microphone boom that always stays where you put it for continually great sound quality
- Left or right side microphone placement
- Concave ear cushions for the ultimate in comfort, fit and sound
- Stainless steel headband won't snag hair
- Quick Disconnect
- Strong Lexan plastic construction for long headset life
- Attractive translucent graphite color
- TuffClip clothing clip for easy cord management
